

Encrypted Sockets

Symmetric Cipher Lab

Barak Gonen

Lab Topics

- ▶ Historical review of 2000+ years
 - Caesar cipher
 - Substitution cipher
 - Vigenere cipher

Remark

- ▶ Work on your own. This is not a test.
- ▶ ChatGPT and online decoders will crack it easily but what will you gain?

Caesar Cipher

- ▶ 1st century BC
- ▶ Described by historian Suetonius
- ▶ Each letter is shifted N times
 - Ex: $N=3$
 - A – > D
 - B – > E
 - Z – > C
- ▶ Break method – brute force

Lab 1

EXXEGO EX SRGI

Substitution Cipher

- ▶ Each letter will be substituted with a random letter
 - Difficult to share substitution table
- ▶ In practice, choose key and create a cipher which is not random but hard to decipher
- ▶ Example: JULIUS CAESAR
 - Remove all spaces and repeating letters
 - JULISCAER

a b c d e f g h i j k l m n o p q r s t u v w x y z
J U L I S C A E R T V W X Y Z B D F G H K M N O P Q

Substitution Cipher Break Method

- ▶ 9th century AD–Arab scholars
- ▶ Every letter has different frequency
- ▶ In large texts, the letters frequency is close to theory

Lab 2

- ▶ File in moodle

Vigenere Cipher

- ▶ Invented 1586 – Vigenere, broken 1853 – Babage
- ▶ “Le chiffre indechifre” – The unbreakable code
- ▶ Made frequency analysis impossible for 300 years

Vigenere Cipher

- ▶ Each letter is encrypted with a different Caesar cipher
- ▶ Key is repeating (weakness)

Plaintext: attackatdawn

Key: LEMONLEMONLE

Ciphertext: LXFOPVEFRNHR

Vigenere Cipher Break Method

- ▶ Perform frequency analysis on various keyword lengths
 - `cipher_text[::test_length]`
 - Calc least mean square vs theory
 - Result: Keyword length
- ▶ Perform separate frequency analysis, while jumping keywords length letters
- ▶ The most frequent letter is likely “E” – we got the Caesar shift, which is the row
- ▶ Combine all rows for the key

Lab 3

- ▶ File in moodle

The Enigma

- ▶ Vigenere's flaw was that the code was repeating
- ▶ Solution: substitution which does not repeat
- ▶ https://youtu.be/d2NWPG2gB_A?si=r9Q6K7HWgND59ETW&t=124
